Any chance Carl could quantify the amount of recycled/reuse materials being managed?

Ed

**Subject:** RE: CFAC three week update October 05, 2015

On October 5, 2015 the DEQ received the most recent update from Carl Burnham of IRS Environmental on the quantity of Asbestos material removed from the CFAC site to date. The current cumulative total of 28,340 pounds of regulated asbestos waste remains steady from the last update as no active asbestos project permits exist for the site. The waste disposal receipts for September indicate the removal of an additional 181,390 pounds of non-regulated asbestos material, yielding a "to date" non-regulated asbestos total of 232,780 pounds. Structures included in this removal include the West Rectifier, Rod Mill Building, Paste Plant, Quonset Hut, West Aluminum Unloader, and Compressor Building.

Demolition notifications remain in place for the West Rectifier and Rod Mill Buildings, although indications are that this is "selective" demolition in order to facilitate forward progress on access.

The DEQ does anticipate a phone conference with Carl Burnham later this month to evaluate forward progress or regulated asbestos removal.

**Subject:** RE: CFAC three week update July 09, 2015

On September 1, 2015 the DEQ received the most recent update from Carl Burnham of IRS Environmental on the quantity of Asbestos material removed from the CFAC site to date. The current cumulative total of 28,340 pounds of regulated asbestos waste and 51,390 pounds of non-regulated material have been removed from the combined West Rectifier, Rod Mill building, Paste Plant, and Quonset Hut.

Currently there are no active asbestos permits open at the site, an indication that non-regulated activity is continuing. Demolition notifications remain in place for the Rod Mill Building, Paste Plant, and West Rectifier.

A project meeting is planned between the contractors next week at which point permits are expected to be filed for regulated asbestos removal in seven distinct areas within the Potline complex. During this meeting the plan for activity over the winter months will be discussed as well.

**Subject:** RE: CFAC three week update July 09, 2015

On August 03, 2015 the DEQ received a spread sheet from Carl Burnham indicating the quantity of asbestos material removed from the CFAC site to date. A cumulative total of 28,340 pounds of regulated asbestos waste and 25,2100 pound of non-regulated material have been removed from the combined West rectifier, Rod Mill building, Paste Plant, and Quonset Hut. The spread sheet will be updated monthly as scale tickets are not received until IRS is invoiced by the Flathead Landfill.

Currently the only active asbestos abatement permit in effect is for the Quonset Hut, and that will expire on August 10 unless an extension is requested. All four previously noted structures have demolition notifications still in force.

I will be in contact with Carl Burnham of IRS after the EPA conducts its open house on the Superfund site investigation in Columbia Falls on August 05, if there are any questions I can relay please let me know.

**Subject:** RE: CFAC three week update July 09, 2015

On July 06, 2015 the DEQ received a spread sheet from Carl Burnham indicating the quantity of asbestos material removed from the CFAC site to date. A cumulative total of 13,060 pounds of regulated asbestos waste and 22,780 pound of non-regulated material have been removed from the combined West rectifier and Rod Mill buildings. Regulated material removal from the Paste Plant continues (likely to be completed by July 15<sup>th</sup>) and after visual and air clearance are performed, will be followed by the non-regulated material removal for an additional 3-4 weeks. The spread sheet will be updated monthly as scale tickets are not received until IRS is invoiced by the Flathead Landfill.

The next buildings to be abated are the Pitch Unloading and Pet Coke buildings which will be permitted with the asbestos program within the next week.

As I will be away from the office until the 27<sup>th</sup>, any immediate questions or concerns can be directed to the asbestos control program at [deqacponline@mt.gov](mailto:deqacponline@mt.gov)

**Subject:** CFAC three week update June 24, 2015

All of the regulated material has been removed from the Rod Mill Building and the Asbestos program has received final air clearance data for this building from Mountain Consulting. The next building scheduled for active abatement of regulated asbestos material is the Paste Plant and conveyors associated with it.

On June 16<sup>th</sup> the program conducted a site visit for the purpose of site familiarization and to ensure regulatory compliance with the asbestos NESHAP, the Montana Code Annotated, and the Administrative Rules. Carl Burnham of IRS Environmental as well as his onsite Supervisor provided insight as to material location, building layout, and the scheduled removal dates. Currently seven accredited asbestos workers are on site, with an anticipated increase of up to sixty during later phases. Calbag is currently conducting removal of machinery within the Rectifier building which is done with project oversight by an IRS employee to address asbestos (non-regulated) identified in the asbestos inspection report. Asbestos containing waste material is being transported several times a week to the Flathead County landfill allowing the landfill to ensure proper coverage with clean fill as directed under the NESHAP. There are some discussions between IRS and the landfill regarding the best way to avoid overwhelming them in later phases as nearly 35 acres of roofing have been identified as non-regulated but still asbestos containing.

In regards to asbestos, no areas of non-compliance were noted.

Of special note to all future site visits, the Asbestos program would like to emphasize that significant physical hazards exist on site. With significant portions of the complex devoid of electrical service, the visibility is severely compromised and will require handheld lighting. In addition to lighting there are areas within the facility where open holes exist, fire suppression has been shut down, and communication is difficult. Some areas where Calbag employees are removing equipment (both inside and outside of buildings) will require the use of respiratory protection due to cutting of aluminum and other metallic components. Standard PPE including hardhat, vest, safety glasses, long sleeve shirt, steel toed boots, and leather gloves are required throughout the plant.

## **DEQ Seeking Members for Asbestos Advisory Group**

Helena – The Montana Department of Environmental Quality is looking for members to serve on an Asbestos Advisory group.

With the passage of House Bill 434 during the 2015 Legislative session, DEQ was charged with organizing an Asbestos Advisory Group made up of stakeholders from a broad variety of interests in asbestos regulation.

The advisory group will advise DEQ on a variety of asbestos-related issues including: regulatory thresholds; permit applicability; public notice requirements; alternatives to permitting; scope of enforcement and cleanup authority; appropriate funding options; clarification of authority between state and federal laws; and workflow improvements.

DEQ is now accepting letters of interest for membership on the advisory group. Stakeholders may apply for one of twelve member categories that include asbestos professions, contractors, consultants, and environmental advocacy groups. A full description of the twelve member categories is outlined on DEQ's website here: <http://deq.mt.gov/asbestos/advisorygroup.mcp>

Letters of interest must specify a preferred member category and include a statement of qualifications. A resume is not required, but is encouraged. Letters of interest will be accepted until July 10, 2015 and may be submitted electronically. Member categories not appointed will remain open until filled.

For more information about the Asbestos Advisory Group, log on to group website at: <http://www.deq.mt.gov/Asbestos/default.mcp> You may also contact the department by calling Bob Habeck at (406) 444-7305 or by e-mail at: [bbabeck@mt.gov](mailto:bbabeck@mt.gov)
